Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 2, 6 and 10 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

It is unclear what is meant by “service option 4 or 10” or “0x8003.”

Appropriate correction is required.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-12 are rejected under 35 U.S.C. 102(e) as being anticipated by Shin (US Patent Application Publication No. 2002/0037712 A1).

Regarding claims 1, 2, 5, 6, 9 and 10, Shin discloses a method of exchanging data between mobile phones through an inter-working function, including a receiving mobile phone 31 that enters data reception mode as a receiving user selects data call receiving mode; a

Art Unit: 2687

transmitting mobile phone 30 that initiates a data call to the receiving mobile phone; as the receiving mobile phone answers the call, data exchange between the mobile phones proceeds; and data transmission from the transmitting mobile phone to the receiving mobile phone is completed. Different service options are also available for communication of the data. See FIGS. 2 and 3, and paragraphs [0033], [0034] and [0035].

Regarding claims 3, 7 and 11, Shin discloses that each of the mobile phones considers all data except control data (along the "control path") transmitted from an inter-working unit (router 40) as data transmitted from the other mobile phone.

Regarding claims 4, 8 and 12, it is inherent that completion of data transmission is terminated when an end key, such as an OFF button, of any of the mobile phones is pressed by a user.

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Hunzinger (US Patent Application Publication No. 2002/0016173 A1) discloses a communication system in which an interworking function unit connects mobile switching centers that serve different cell clusters.
